                                                      CC ability to increase insulin resistance and insulin screening commandation. In contrast, in a normal compregnancy, both insulin resistance and insulin secretion increase. GDM CC pregnancies are associated with complications in both the mother and the pregnancies. Women with GDM have increased rates of Caesarian delivery, Chypertensive disorders such as pre-eclampsia, and urinary tract confections. GDM results in an elevated rate of foetal abnormalities such as necessarian delivery, as neural tube defects, and is associated with an increased risk of CC neonatal morbidites such as hypoglycaemia, hypocalcaemia, hypomagnesaemia, polycythaemia, hyperbilirubinaemia, and subsequent CC childhood and adolescent obseity. Exendins are peptides from the salivary CC secretions of the Gila monster (exendin-4) and the Mexican beaded lizard (exendin-3) which exhibit homology with several members of the CC insulinotropic effects. Unlike the compounds used to treat type 2 CC diabetes, which are contraindicated for GDM, exendins and exendin cagonists do not cross the placenta and thus do not cause severe prolonged CC hypoglycaemia in the newborn. They have a potent and prolonged effect on CC hypoglycaemia in the newborn effect on the compounds used to treat type 2 CC diabetes, which are contraindicated for GDM, exendins and exendin cause severe prolonged contrains as they inhibit gastric emptying and reduce appetite. The compound upon the sequence represents a exendin a gonist of the invention which is cause upon the sequence represents a exendin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Exendin agonist; gestational diabetes mellitus; GDM; insulin resistance; pregnancy complication; neonatal abnormality; blood glucose modulator; insulinotropic; anorectic; exendin-4.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to the use of an exendin (AAB64181-B64182) or an exendin agonist (AAB64185-B64368) for treating gestational diabete mellitus (GDM) in a patient. GDM arises during pregnancy, and is due to a combination of increased insulin resistance and a diminished
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Use of exendins or exendin agonists for lowering or reducing blood glucose levels and treating gestational diabetes mellitus in a subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Example 76; Page 67; 133pp; English

CC pregnancies are associated with complications in both the mother and the foetus. Women with GDM have increased rates of Caesarian delivery, typertensive disorders such as pre-eclampsia, and urinary tract presents as neural tube defects, and is associated with an increased risk of caesarian delivery, as neural tube defects, and is associated with an increased risk of meanatal morbidites such as hypoglycaemia, hypocalcaemia, childhood and adolescent obseity. Exendins are peptides from the salivary exerctions of the Gila monster (exendin-4) and the Mexican beaded lizard (exendin-3) which exhibit homology with several members of the Gliamonster (exendin-4) and the Mexican beaded lizard (exendin-3) which exhibit homology with several members of the Gilamonster. Only particularly GIP-1, and have similar consolities do not cross the placent and tube do not cause severe prolonged agonists do not cross the placent and thus do not cause severe prolonged thypoglycaemia in the newborn. They have a potent and prolonged effect on blood glucose, and, unlike conventional insulin therapy, should not cause weight gain, as they inhibit gastric emptying and reduce appetite. The presents acquence represents a exendin agonist of the invention which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 23

                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to the use of an exendin (AAB64181-B64182) or an exendin agonist (AAB64185-B64368) for treating gestational diabete mellitus (GDM) in a patient. GDM arises during pregnancy, and is due to a combination of increased insulin resistance and a diminished ability to increase insulin secretion. In contrast, in a normal pregnancy, both insulin resistance and insulin secretion increase. Gl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Exendin agonist; gestational diabetes mellitus; GDM; insulin resistance; pregnancy complication; neonatal abnormality; blood glucose modulator; insulinotropic; anorectic; exendin-4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of exendins or exendin agonists for lowering or reducing blood glucose levels and treating gestational diabetes mellitus in a subject,

                                                CC ability to increase insulin secretion. In contrast, in a normal CC pregnancy, both insulin resistance and insulin secretion increase. CDM CC pregnancies are associated with complications in both the mother and the CC foetus. Women with GDM have increased rates of Caesarian delivery, Chypertensive disorders such as pre-eclampsia, and urinary tract infections. GDM results in an elevated rate of foetal abnormalities such as neural tube defects, and is associated with an increased risk of CC neonatal morbidites such as hypoglycaemia, hypocalcaemia, hypographiams, and subsequent childhood and adolescent obseity. Exendins are peptides from the salivary CC secretions of the Gila monster (exendin-4) and the Mexican beaded lizard (exendin-3) which exhibit homology with several members of the Gila monster (exendin-4) and the Mexican beaded lizard CC glucagon-like peptide family, particularly GIP-1, and have similar insulinotropic effects. Unlike the compounds used to treat type 2 diabetes, which are contraindicated for GDM, exendins and exendin CC insulinotropic effects. Unlike the compounds used to treat type 2 Cdiabetes, which are contraindicated for GDM, exendins and exendin CC hypoglycaemia in the newborn. They have a potent and prolonged effect on blood glucose, and, unlike conventional insulin therapy, should not cause weight gain, as they inhibit gastric emptying and reduce appetite. The CC based upon the sequence of exendin-4 agonist of the invention which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best Local Similarity Matches 19; Conserv
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to the use of an exendin (AAB64181-B64182) or an exendin agonist (AAB64185-B64368) for treating gestational diabetemellitus (GDM) in a patient. GDM arises during pregnancy, and is due to a combination of increased insulin relations and a diminished
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Exendin agonist; gestational diabetes mellitus; GDM; insulin resistance; pregnancy complication; neonatal abnormality; blood glucose modulator; insulinotropic; anorectic; exendin-4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 92; Page 75; 133pp; English.

   Amino acid sequence of an extendin agonist.
                             20-OCT-2000 (first entry)
                                                                                                                                                                                                                                                                                                                  This invention describes a novel formulation (1) comprising an exendin or exendin agonist peptide, a buffer and an iso-osmolality modifier which has a pH of 3-7. The products of the invention have antidiabetic activity. The exendin or exendin agonist is used to increase the sensitivity of a subject to insulin to treat diabetes and disorders which would benefit from agents which lower plasma glucose levels and disorders which would benefit from agents that delay and/or slow gastric emptying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Exendin;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  exendin agonist peptide SEQ ID NO 37.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAB11311 standard; Peptide; 39 AA.

Extendins are found in the salivary glands of the Gila monster and Mexican Beaded lizard, and have sequence similarity to glucagon-like peptides. They are used in the method of the invention. The specification describes a method for lowering plasma glucagon, comprising administering an exendin, an exendin agonist, a modified exendin or a modified exendin agonist. These compounds lower plasma glucagon level. The method is useful for lowering plasma glucagon in subjects, preferably humans, suffering from necrolytic erythema or glucagonoma. The method is also useful for treating hyperglucagonemia and other conditions that would benefit from reduced glucagon levels and/or suppression of glucagon, e.g. type 1 and type 2 diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Extendin; Gila monster lizard; Mexican Beaded lizard; agonist; glucagon-like peptide; plasma glucagon; necrolytic erythema; glucagonoma; hyperglucagonemia; diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      14-JAN-1999; 99US-0116380.

         Amino acid sequence of an extendin agonist.
                                                                                                                                                                                                                                                                                                                                                                                            AAY94013-43 represent extendin agonists, derived from AAY94012. Excendins are found in the salivary glands of the Gila monster and Mexican Beaded lizard, and have sequence similarity to glucagon-like peptides. They are used in the method of the invention. The specification describes a method for lowering plasma glucagon, comprising administering an exendin, an exendin agonist, a modified exendin or a modified exendin agonist. These compounds lower plasma glucagon level. The method is useful for lowering plasma glucagon in subjects, preferably humans, suffering from necrolytic erythema or glucagonoma. The method is suffering from reduced glucagonemia and other conditions that would benefit from reduced glucagon levels and/or suppression of glucagon, e.g. type 1 and type 2 diabetes.

                                                                                                                                                                                                                                                                                                                                                                                    AAY94013-43 represent extendin agonists, derived from AAY94012. Extendins are found in the salivary glands of the Gila monster and Mexican Beaded lizard, and have sequence similarity to glucagon-like peptides. They are used in the method of the invention. The specification describes a method for lowering plasma glucagon, comprising administering an exendin, an exendin agonist, a modified exendin or a modified exendin agonist. These compounds lower plasma glucagon level. The method is useful for lowering plasma glucagon in subjects, preferably humans, suffering from necrolytic erythema or glucagonoma. The method is also useful for treating hyperglucagonemia and other conditions that would benefit from reduced glucagon levels and/or suppression of glucagon, e.g. type 1 and type 2 diabetes.
Exendin agonist peptide #26.

                                                                                                                                                                                                                                                                                                                                       The patent discloses a method for modulating plasma or postprandial triglyceride and other lipid levels by administering exendin or an exendin agonist. Exendins have inctropic and diuretic effects. They suppress the secretion of glucagon. Exendin and its agonists have a significant effect on the reduction of blood serum triglyceride concentrations. They are used to treat coronary heart disease and dyslipidaemia, and for modifying postprandial triglyceride levels. Note: The present sequence is an agonist of exendin. Note: The present sequence is not shown in the specification but is derived from SEQ ID NO:3 shown in page 17 of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Modified-site

                                                                          Query Match
                                                                                                                            The patent discloses a method for modulating plasma or postprandial triglyceride and other lipid levels by administering exendin or an exendin agonist. Exendins have inotropic and diuretic effects. They suppress the secretion of glucagon. Exendin and its agonists have a significant effect on the reduction of blood serum triglyceride concentrations. They are used to treat coronary heart disease and dyslipidaemia, and for modifying postprandial triglyceride levels. The present sequence is an agonist of exendin. Note: The present sequence is not shown in the specification but is derived from SEQ ID NO:3 shown in page 17 of the specification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 1
             Sequence 99, Application US/09323867A
PATENT NO. 6506724
GENERRAL INFORMATION:
APPLICANT: Amylin Pharmaceuticals, Inc.
APPLICANT: Young, Andrew et al.
TITLE OF INVENTION: USE OF EXEMPLIAND AGONISTS THEREOF FOR THE TREATMENT
TITLE OF INVENTION: OF GESTATIONAL DIABETES MELLITUS
FILE REFERENCE: 030639,0032.UTL2 (243/131US)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     APPLICANT: Amylin Pharmaceuticals, Inc.

Sequence 184, Application US/09323867A

Patent No. 6506724

GENERAL INFORMATION:
APPLICANT: Amylin Pharmaceuticals, Inc.
APPLICANT: Young, Andrew et al.
TITLE OF INVENTION: USE OF EXENDING AND AGONISTS THEREOF FOR THE TREATMENT TITLE OF INVENTION: OF GESTATIONAL DIABETES MELLITUS
FILE REFERENCE: 030639.0032.UTL2 (243/131US)
CURRENT APPLICATION NUMBER: US/09/323,867A
CURRENT FILING DATE: 1999-06-01
NUMBER OF SEQ ID NOS: 189
SOFTWARE: Patentin Ver. 2.1 and Microsoft Word
SEQ ID NO 184
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 83, Application US/09323867A
Patent No. 6506724
GENERAL INFORMATION:
APPLICANT: Amylin pharmaceuticals, Inc.
APPLICANT: Young, Andrew et al.
TITLE OF INVENTION: USE OF EXENDINS AND AGONISTS THEREOF FOR THE TREATMENT
TITLE OF INVENTION: OF GESTATIONAL DIABETES MELLITUS
FILE REFERENCE: 030639.0032.UTL2 (243/131US)
CURRENT APPLICATION NUMBER: US/09/323,887A
CURRENT APPLICATION NUMBER: US/09/323,887A
CURRENT FILING DATE: 1399-06-01
NUMBER OF SEQ ID NOS: 189
SOFTWARE: PatentIn Ver. 2.1 and Microsoft Word
SEQ ID NO 83

APPLICANT: Young, Andrew et al.
APPLICANT: Young, Andrew et al.
TITLE OF INVENTION: USE OF EXENDINS AND AGONISTS THEREOF FOR THE TREATMENT
TITLE OF INVENTION: OF GESTATIONAL DIABETES MELLITUS
TILE REFERENCE: 030639,0032.UTL2 (243/531US)
CURRENT APPLICATION NUMBER: US/09/323,867A
CURRENT FILING DATE: 1999-06-01
NUMBER OF SEQ ID NOS: 189
SOFTWARE: Patentin Ver. 2.1 and Microsoft Word
SEQ ID NO 28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 28, Application US/09323867A Patent No. 6506724
GENERAL INFORMATION:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 J. Biol. Chem. 267:7402-7405(1992).
-!- FUNCTION: Has a VIP/secretin-like biological activity.
-!- with the exendin receptor.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the venom gland.
-!- SIMILARITY: BELONGS TO THE GLUCAGON FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SEQUENCE OF 48-86.

SUBCELLULAR LOCATION: Type I membrane protein.

DISEASE: Defects in NPR3 are the cause of a number of skeletal-
newsprowth phenotypes, Longjohn (Lgj), Longjohn 2J (Lgj-2J) and overgrowth phenotypes, Longjohn (Lgj), Longjohn 2J (Lgj-2J) and strigosus (Stri). These are all recessive conditions characterized by an elongated body, thoracic kyphosis, arachnodactyly, and sacral and/or tail kinks, but no significant changes in cranicfacial structures.

CIRCILATION THERE SEEM TO BE AT LEAST THREE ANP RECEPTORS: TWO WITH GUANYLATE CYCLASE ACTIVITY (ANP-A AND ANP-B AND ONE (ANP-C) WHICH IS PROBABLY RESPONSIBLE FOR THE CLEARANCE OF ANP FROM THE CIRCILATION WITHOUT A ROLE IN SIGNAL TRANSDUCTION.

SIMILARITY: TO ANP-A AND ANP-B RECEPTOR IN THEIR EXTRACELLULAR AND SIGNAL TRANSDUCTION.
